From Bicom Systems Wiki

Upgrading SERVERware consist of two parts: upgrade of the operating system per each host (core system upgrade) and upgrade of SERVERware software by GUI.

Some upgrades require "core-system upgrade", for example, upgrade from SERVERware 3.x to 4.x. This procedure must be done under the supervision of support engineers. Please contact your Account Manager for details.'

If the SERVERware requires a core system upgrade on the **upgrade** tab you will have the message that says core system upgrade required!!

Example:

There are newer package updates that require the core system update of all hosts in the cluster!

Otherwise (for example upgrade SERVERware 4.0 to 4.x.x), upgrade version 4.0 to 4.x.x should be easily done from the GUI, following the guide from this link:

SERVERware 4.0 upgrade to 4.x.x how to

Also upgrade version 3.0 to 3.x.x should be easily done from the GUI, following the guide from this link:

SERVERware 3.0 upgrade to 3.x.x how to
